

Looking for Back-end Developers

A great opportunity

Do you want to work on a project with world changing potential? Are you interested in the environment, innovation and social welfare? This could be a once in a lifetime opportunity. If you are willing to break norms and you like a good challenge, you may be the ideal person to be a part of our team.

Who Are We?

The world loves shrimp, but the shrimp industry is destroying our world.

Atarraya, Inc. is a Food-Tech company that uses biotechnology, software and automation to turn shrimp into the most sustainable, accessible and nutritious protein source available.

We want to make aquaculture the maximal benchmark for sustainable protein production in the 21st century and show that, with technology and innovation, we can finally blow up heath and harmony's dependence upon prosperity.

Our Future

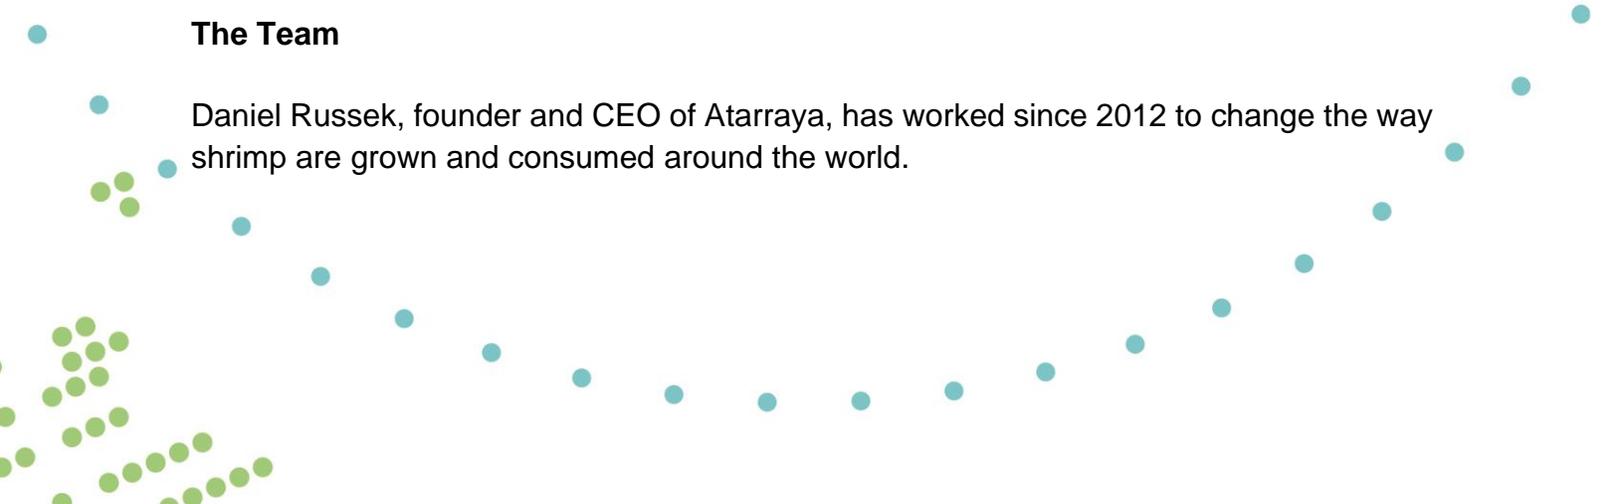

Following an invitation from the state government of Indianapolis, USA, to start operations there in the near future, Atarraya, a start-up in series A, is seeking the appropriate financing to make the absolute most of this opportunity.

The Product

The objective of our software, Atarraya, is the development of a platform which manages automatic and modular farms for shrimp production anywhere in the world.

The Team

Daniel Russek, founder and CEO of Atarraya, has worked since 2012 to change the way shrimp are grown and consumed around the world.

Rafael M. Mohrez has been a fundamental part of both large corporations and Start-ups. He has 15 years of experience in operations management, logistics, strategic and financial planning, and has driven many companies toward excellence and profitability.

The Atarraya Inc development team is under construction right now, and you can be part of it.

Profile

Our goals are very ambitious. We are looking for extraordinary people who are up to the challenges we face and who want to be part of a transcendental project. In addition to a great attitude and commitment, we are looking for these skills in any applicant for the position:

- ✓ 80 projects created with C# ASP.net core
- ✓ Razor/WebAPI/EF core/LINQ/Npgsql/code first migrations/kestrel
- ✓ Postgresql
- ✓ Stateless sideways scalable architecture
- ✓ Self hosting on Ubuntu
- ✓ Haproxy load balancing
- ✓ GitHub feature branching
- ✓ Zabbix infrastructure monitoring
- ✓ Inhouse building process

Applicant experience wish list:

- ✓ Full stack
- ✓ C# .NET (or equivalent)
- ✓ Web technologies (HTTP/DNS/ISO-OSI)

- ✓ Database design
- ✓ Linux administration
- ✓ System architecture
- ✓ Code review
- ✓ Knowledge about one or more design patterns
- ✓ English

If you know other programming languages too... amazing!

Come on! We'd love to meet you.
